

What Are HOUSEHOLD HAZARDOUS PRODUCTS?

A wide range of materials used in homes are considered hazardous. Generally, these products are oil- or solvent-based, contain heavy metals such as mercury, or are caustic materials like drain cleaners.

Why should I be concerned?

Thousands of adults will visit a poison control center or emergency room this year with burns, poisonings, or eyesight damage caused by hazardous household products. Almost 1 million children under the age of six will be poisoned or injured in the home by household products, as will thousands of pets.

How can they be identified?

Read the label. If the label says *Danger*, *Poison*, *Warning*, or *Caution*, the product may be hazardous to your health or may pollute our ground and surface water.

Should I throw them away?

No! Some household products release toxic fumes or explode if they are mixed together in the trash, causing fires or injuring workers. Dumping them in landfills or sewers could contaminate our water supply or kill fish and other wildlife.
